Comdata®Health Release Notes, v. 1.7, 7/14/2013

The latest update to the Comdata®Health system includes the following items:

- New Web Service: Stop Payment
- Adding Activation Date to Virtual Card Details
- Adding Date/Time Stamp to the Funding File
- Creating Business Intelligence Reports by Corp Code

↘ New Web Service: Stop Payment (available 7/9)

This new web service request, Stop Payment, allows clients to cancel payment on a virtual card if the provider chooses a traditional payment instead. Based on the funding model (pre-card issuance or post-authorization) and the current card status, the requested card will be blocked permanently or temporarily until authorization is dropped after 7 days. In the case of a temporary block (there are outstanding authorizations), the card amount is returned after 7 days if the authorization drops. If the authorization settles, the payment is processed as normal.

This feature works with card numbers or tokens.

For the technical specifications for this web service, see our updated Comdata web services 2.0 documentation available on the Resource Center (**ICD > Help > Resource Center**) or through your Comdata Health representative.

↘ Adding Activation Date to Virtual Card Details (available 7/14)

For clients using an inventory of virtual cards, the card activation date differs from the initial date a card was assigned to inventory. This enhancement creates two separate values, Creation Date and Activation Date, within the card listing table used in PS14 bulk card assignment and inventory.

↘ Adding Date/Time Stamp to the Funding File (available 7/14)

To ensure manual adjustments to the funding file (MT001 or MT002) are recorded accurately, this enhancement adds a date/time stamp associated with a manual adjustment to the file.

↘ Creating BI Reports by Corp Code (release date pending)

Many Comdata Health clients maintain multiple plan sponsor accounts under one corporate code (Corp Code). To allow these clients to pull a Business Intelligence (BI) report covering all their accounts, this enhancement adds the capability to generate BI reports by Corp Code.
