# iConnectData

## Completed Work Stories

### VCTB Remittance Branding & Masking Updates

The VCTB header has been updated to Corpay branding, removing Comdata Truck references and aligning color, spacing, and overall design with other remittance formats. The VCTB remittance template now matches standard Corpay styling. In addition, updated card number masking logic has been applied so the middle six digits are masked on VCTB remittances.

## Completed Bug Fixes

### CodeWord Copy Issue Resolved

Fixed an issue where CodeWords were not properly carried over when copying an existing user. Copied users with a new CodeWord will now correctly appear in both the mainframe and ICD UI.

### External User SFTP Card Listing Report Error Fixed

Fixed an issue where External users encountered an error when generating the Card Listing SFTP Report after entering report parameters. External users can now successfully generate the report without errors.

## Additional Training and Support Resources
